CAREER OBJECTIVE

Final-year B.Tech CSE (AI&ML) student with hands-on experience in Java, Selenium, Playwright, REST Assured, and JUnit 5 for UI and API test automation. Familiar with Agile/Scrum, functional testing, regression testing, API testing, and CI/CD. Seeking a **QA Automation Engineer** role to contribute to software quality through test automation, functional testing, and defect management.

EDUCATION

B.Tech, CSE (AI&ML) — MIET, Meerut (AKTU)

CGPA: 7.0 | 2023–2027 (Expected)

EXPERIENCE

SkillNexus — Software QA Tester Intern

[GitHub](#)

Remote | Sep 2026 – Present

- Designed and executed **30+ manual test cases**, documenting defects with screenshots, reproduction steps, and expected vs. actual results.
- Prepared test plans, performed **end-to-end functional testing**, logged defects in Jira with severity and priority, tracked defect lifecycle, and prepared test summary reports.

SKILLS

Test Automation: Selenium WebDriver, Playwright, REST Assured, JUnit 5, Page Object Model (POM)

Programming & Database: Java, SQL, MySQL, OOP, JDBC

API & Web Testing: REST API Testing, Postman, UI Testing, End-to-End Testing

Testing: Functional, Regression, Smoke, Sanity, Negative, Boundary, Integration & System Testing

Test Design: Test Case Design, Equivalence Partitioning, Boundary Value Analysis

Defect Management: Jira, Defect Tracking, Defect Reporting, Defect Life Cycle, Severity & Priority

QA Process & Methodologies: Agile/Scrum, STLC, SDLC, Test Execution, Test Reporting

Tools: Maven, Git, GitHub

CI/CD: GitHub Actions

PROJECTS

Government Scheme Recommendation System

[GitHub](#)

Java, Selenium WebDriver, JUnit 5, Page Object Model, Spring Boot, MySQL, GitHub Actions

- Built a Selenium WebDriver + JUnit 5 automation framework using Page Object Model (POM) to automate **25 end-to-end and functional test cases** across user and admin workflows.
- Automated **functional, negative, boundary, demographic, and regional eligibility testing**, validating age/income limits, gender, occupation, category, state filtering, form validation, and ineligible-user scenarios.
- Automated **Admin CRUD workflows** for scheme creation, update, deletion, and invalid-ID handling, with reusable Page Objects, test data models, wait utilities, and browser configuration.
- Integrated the automation suite with **GitHub Actions CI/CD** to automatically build the project and run Selenium/JUnit 5 tests with Maven on code changes.

Support Ticket Management & Automated Classification System

[GitHub](#)

Java, Playwright, REST Assured, JUnit 5, Page Object Model, Spring Boot, MySQL, JDBC

- Developed a support ticket management system with keyword-based **automated classification**, deriving category, severity, priority, and SLA from ticket descriptions and storing results in MySQL.
- Built a Playwright + JUnit 5 UI automation framework using Page Object Model (POM) with **15 end-to-end tests** covering ticket creation, validation, status lookup, ID generation, classification, admin dashboard, and filtering.
- Implemented **REST Assured API automation with 10 tests** covering POST/GET/PUT endpoints, request validation, HTTP status codes, invalid ticket IDs, status/priority filtering, ticket updates, and response-field validation.
- Performed functional, negative, validation, classification, API, UI, and end-to-end testing, verifying scenarios such as **Payment, Outage, Password, and Database issues** map to the expected severity, priority, and SLA values.
